

Amendments to the Specification:

Please replace the paragraph beginning at line 12 on page 2 with the following rewritten paragraph:

Figure 1 shows an example of the use of an efficiently arranged prior art system for supporting voice activated services over a telephone interface at element 130. Figure 1 superimposes that configuration on a high level view of such a platform as illustrated by telephone 100 coupled to the telephone network 104, which is in turn coupled to a telephone gateway 107, and a phone application platform 110. In one embodiment, the phone application platform 110 can correspond to a voice portal that provides voice activated access to a variety of information including personalized content. Such a platform is described in greater detail in United States Patent Application 09/426,102 entitled "Method and Apparatus for Content Personalization over Telephone Interface," now U.S. Patent No. 6,807,574.[""]
